

Arab Health and the New ORB Medical Gas Outlets

As you may or may not know, our Sales and Marketing Manager, Andrew, along with sales colleagues Russ and Phil were out in Dubai for the Arab Health Exhibition between 29th January and 1st February.

Although hoping for sun, sand and sea and a break from the cold, rainy and miserable weather in the UK; it didn't really meet expectations—being only mild and not quite the shorts and t-shirt weather as was anticipated! Despite this, the team had a great time seeing old faces, putting faces to voices they've heard only on the telephone and meeting new faces altogether. We really do have a great team here at MEC Medical and are always happy to help with any enquiry. Friendly and approachable, the odd bad joke here and there, but all extremely knowledgeable in the field and passionate about the products we produce.

Whist in Dubai, we had fantastic feedback with the quality of our Hose Assemblies, the Test Equipment we provide and Regulators, to name but a few. We really do work hard to meet the highest standards of quality in all of our products and it's great to see this hard work is appreciated. We've done very well so far... but there's more to come!

We've recently added a couple of new products to our ever-expanding product list, which we're extremely excited for you all to see. It's been a long time coming in product design and manufacture, but we wanted to make sure they're all just right!

Welcome the new Orb Smoothflow Terminal Unit

Fully compliant with the requirements of ISO 9170-1. The new terminal unit features a larger 51mm collar which is completely smooth, reducing the change of any build-up of dirt.

Let's be honest, no one likes cleaning, and getting in those little crevices can be a right pain, so with the new shape it definitely makes maintenance a lot easier and much more efficient. The

Orb also features two independent springs for added balance and durability. All second fix parts and boxes include a silver antimicrobial additive for inherent antimicrobial protection.

I think we can all agree that this Orb looks pretty smart, Dave Watson – our *Technical Director* is pretty chuffed with himself - his head has already grown an extra few centimetres!

The Smooth flow Terminal Units have already been a big hit to those who were lucky enough to get the heads up, but they're now here for you to view and purchase on page 25-27 of our new 2018 catalogue .

If you have any questions regarding the Orbs, or anything at all for that matter, please get in touch and we'll be more than happy to discuss and help with whatever your needs and requirements are.
